

IN THE SPECIFICATION:

Please amend the specification as follows:

Please amend paragraph [0063] of page 14 as follows:

--A configuration of the invention includes a display device comprising a plurality of source signal lines over an insulating surface, a plurality of gate signals, a plurality of power supply lines in columns, a plurality of power supply lines in ~~series~~ rows, and a plurality of pixels arranged in matrix, wherein each of the plurality of pixels includes a switching thin film transistor, a driving thin film transistor, and a light emitting element, wherein each of the plurality of pixels is connected to one of the plurality of power supply lines in columns and one of the plurality of power supply lines in ~~series~~ rows, and wherein an insulating thin film is formed in a portion under at least one of the plurality of source signal lines, the plurality of gate signal lines, the plurality of power supply lines in columns, and the plurality of power supply lines in ~~series~~ rows.-

-

Please amend paragraph [0064] of page 14 as follows:

--Another configuration of the invention includes a method of manufacturing a display device comprising the steps of: forming a plurality of source signal lines over an insulating surface, forming a plurality of gate signal lines, forming a plurality of pixels arranged in matrix, and each of said plurality of pixels includes a switching thin film transistor, a driving thin film transistor, and a light emitting element, forming a plurality of power supply lines in columns, a plurality of power supply lines in ~~series~~ rows, and connecting each of the plurality of pixels to one of the plurality of power supply lines in columns and one of the plurality of power supply lines in ~~series~~ rows by a droplet discharging method or a printing method.--
